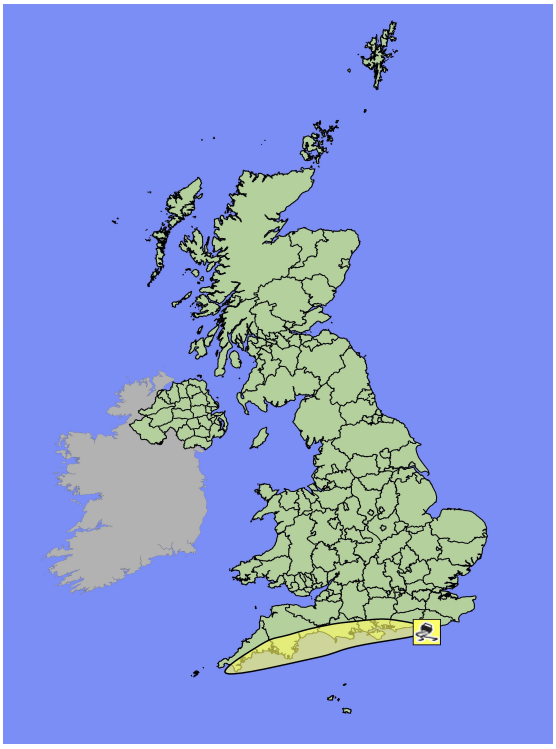
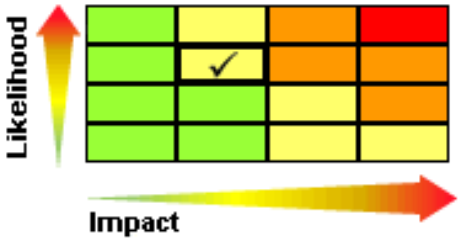
National Severe Weather Warning Service





CANCELLED

Chief Forecasters Assessment
Showery remnants of a weak frontal zone will remain close to southwestern coastal areas during Wednesday night and may lead to an increased risk of ice forming on untreated surfaces. As with most showers these will be rather hit and miss and not all places will be affected.

The Met Office have issued a **Yellow Alert** of **Ice**

Valid from **00:05 on Thu, 24th Jan 2013** until **11:00 on Thu, 24th Jan 2013**

As temperatures fall on Wednesday night, icy stretches are likely to form on many untreated surfaces, especially where residual showers drift inland off the English Channel. The public are advised to take extra care.
